Speaker Introduction (Short Version):

Peter Knapp is a **Founding Architect of Tillion**. With over 30 years of experience in digital infrastructure, Peter is the former **Managing Director of Interxion Germany**, where he spent 14 years shaping the European colocation landscape. Having held senior executive roles at **CloudHQ** and **Global Switch**, Peter is a recognized expert in data center operations, market expansion, and AI-ready infrastructure design. He is a regular voice at industry conferences and a leading authority on the future of the global data center ecosystem.

Complete Biography (Full Version):

Founding Architect & Director General, Tillion | Global Infrastructure Leader

Peter Knapp is a veteran executive and strategist with over 25 years in the global data center and digital infrastructure industry. Throughout his career, he has shaped the growth of Europe's most important interconnection hubs and led large-scale expansions for world-class colocation and hyperscale operators.

He previously served as a member of the Advisory Council of the German Datacenter Association (GDA), contributing his extensive industry expertise to national initiatives on sustainability, energy strategy, and digital infrastructure development.

As a **Founding Architect and Director General at Tillion**, Peter brings deep industry experience to the company's next-generation data center platform. He plays a central role in shaping Tillion's commercial and operational strategy, with a focus on building the high-density, AI-ready environments demanded by today's hyperscale ecosystem.

Before joining Tillion, Peter served nearly 15 years as **Managing Director for Germany at Interxion**, where he was instrumental in establishing Frankfurt as a premier global interconnection hub. He later held senior leadership roles at **Global Switch**, where he served as **Group Director, Europe**, overseeing regional operations, customer engagement, and major expansion programs across the continent.

A respected voice in the sector, Peter is a frequent keynote speaker and industry panelist, including at events such as **RENMAD Datacenters 2026**, where he shares insights on hyperscale capacity, energy flexibility, and the next wave of infrastructure evolution
